At any given time, there is one stable release of Debian, which has the support of the Debian security team. When a new stable version is released, the security team will usually cover the previous version for a year or so, while they also cover the new/current version. Only stable is recommended for production use.

Linux Kernel   OS

📅 Last updated on 18 March 2024 🤖

The Linux kernel is a free and open-source, monolithic, modular, multitasking, Unix-like operating system kernel. Linux is deployed on a wide variety of computing systems, such as embedded devices, mobile devices (including Android), personal computers, servers, mainframes, and supercomputers.
